FROM THE PRESIDENT

Dear Pyro Friends,

Welcome to the 8th edition of our product and services catalog. I hope you find everything it takes to make your display the best it can be!

In addition to all the great products available to you, we have updated our "how to do it" information, covering all the licenses and permits you will need to have in order to purchase and shoot your display. While this information is correct at the time of printing, we realize that local, state and federal rules do change and sometimes with little notice. For this reason, we have a section of our web site available to keep you current on the latest and greatest the lawmakers have to offer (www.premierpyro.com). Visit the latest news section often!

For our Missouri customers, State licensure is now required in the Show Me state! In order to fire a display in the State of Missouri you must now have at least one Licensed Operator on the site. I encourage each operator to get in touch with Michelle at the Missouri Fire Marshals Office *today* to get the ball rolling. Don't wait until it's too late to get your license this year.

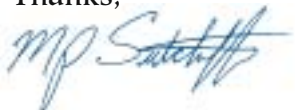

Tennessee is also working to adapt a state licensure program. Be sure to hit the web site for the most current information available (www.premierpyro.com).

I have been reviewing several display sites across the nation where accidents have occurred. One of the most common reasons given as a contributing factor to the accident was lack of or NO training. Premier continues to offer the finest training classes in the nation, Be sure to sign up to attend one of the seven near you this spring. Providing safe displays is everyone's responsibility, but ultimately the lead operator has Primary Responsibility for the display and its safe operation.

The staff really out did themselves at the Annual Labor Day Camp Barnabus Burn Benefit this year. By the time the smoke cleared over \$10,000.00 was raised to put nearly twenty children through the week long summer camp. If you have not been to this Labor Day event I would encourage you to check it out. Of course there is fireworks involved!

Enjoy this catalog. We hope you will consider Premier as your supplier for top quality fireworks, pyro supplies and equipment. Treating customers the way we would like to be treated is our simple rule for success. Give us a call and see if you don't like what you see (and hear)!

Thanks,

Matt Sutcliffe
President, Premier Pyrotechnics, Inc.

Matt Sutcliffe – *President and CEO*

Born and raised in Cass County, south of Kansas City, Matt now resides in Richland, Missouri. Matt oversees the day to day operations of the company, and designs the soundtracks and scripts for many of Premier's pyromusicals. With a background in Radio Broadcasting and Sound Reinforcement, Matt provides a knowledge of technical support to Premier which allows for the smooth presentation of multi-media events. Matt's life in the pyrotechnic industry began by presenting displays at his parents' resort on the holidays. This start has turned into the dream of heading a full service display company. That dream continues as Premier grows into one of the finest pyrotechnic companies in America. In addition to regularly shooting shows, Matt continues to lead the educational movement in the pyrotechnic industry by instructing over 2,000 students per year and now holds the distinction of being the lead instructor at the nation's only collegiate pyrotechnics course, offered each fall at the University of Missouri – Rolla.

Matt can be reached via e-mail at: matt@premierpyro.com.

Jeff Koster – *VP of Operations, Northern Region: South Dakota, North Dakota, Nebraska, Minnesota, and Iowa*

Jeff resides in Yankton, South Dakota where our Northern Divisional Plant and Office is located. As a master pyrotechnician, Jeff is constantly working with new product development often implementing our customers' ideas into our product lines. Jeff has been involved in fireworks since the age of five when his uncle, who was a master pyrotechnician, took Jeff along to shows every chance he could. At the age of sixteen, Jeff was finally able to participate in his uncle's business. Jeff learned the art of pyrotechnics not from a book, but from his uncle. At the age of eighteen, Jeff was shooting displays, and creating spectacular effects for his shows. Jeff's love of fireworks led him and his partner to what is now Premier Pyrotechnics, Inc. Our motto is simply this: **"Customer Satisfaction is #1 in Products, Prices, Service and Safety."**

Jeff can be reached via e-mail at: jeff@premierpyro.com.

PREMIER PYROTECHNICS, INC.

OPEN LETTER TO ALL FIREWORKS PURCHASERS

The new BATFE regulations that took effect are explained below. These regulations affect different groups of purchasers differently, so I encourage you to read carefully and ask questions if needed!

It is my intention to dispel any rumors that "you can't buy fireworks in America" or even that it has become impossibly difficult. Relax would be the word of the day. Let's get through these changes together this year, and in the upcoming years it will get easier just because we have learned the process.

WE WILL BE ASSISTING YOU IN FILLING OUT APPLICATIONS AT ALL SHOOTERS SCHOOLS THIS YEAR!

Okay, here comes the plain English translations of the new regulation's handed to us from the BATFE.

1. If you have been purchasing and shooting your fireworks as a Government entity, ie. City of...Fire Department, Police Department, any government entity, there are no changes in what you do. Period, it's that simple. Business as usual. Fill out the 5400.4 at the time of purchase and shoot your show.
2. If you are purchasing a display that we, Premier Pyrotechnics Inc., are shooting for you, there are **NO CHANGES**. It's business as usual.
3. If you are an individual or business who purchases from us, and you don't live in Missouri, Kansas or South Dakota then nothing has changed. You will need to file for a Type 54 or Type 55 permit. Both are explained in detail as options B and C below.
4. If you are an individual or business that is not affiliated with a Government entity, AND you were purchasing from us in either Missouri, Kansas or South Dakota then there are the following changes.

You were able to make purchases using the 5400.4, Yellow Form that you filled out at the time of purchase. You got this from us when you picked up the product. This is no longer an option after May 24, 2003. So what do we do Matt? Well I'm glad you asked.

There are a couple of options here that are for you to decide upon, based on your individual situation.

- A. Fill out the application, 5400.13, available from us or by downloading at <http://www.atf.gov/forms/pdfs/f540013.pdf> for a Type 54 permit which is User of Display Fireworks. This is good for 3 years and cost \$100. You can buy as many shows as you want in those three years. (I would prefer you buy from us and recently we have been in a state of confusion!) With this application, you will need to submit a picture of yourself, and a fingerprint card. We will be doing both at our shooter's schools as well as having the applications available. If you want to do this yourself you can go to the ATFE web site and download the form at <http://www.atf.gov/forms/pdfs/f540013.pdf> and go to your local sheriff's department and get your prints done on a standard print card as well as getting a picture. If you are wanted, this would be a dumb idea, but hey, if you are wanted you are not going to get a permit anyway!
- B. Fill out the application, 5400.21 available from us or by downloading at <http://www.atf.gov/forms/pdfs/f540021.pdf> and get a Type 55 permit which is User (Limited) of Display Fireworks. The differences between this and the Type 54, described above is it costs \$75 versus \$100 and it is good for 1 purchase within 1 year. Also the instructions say to allow 90 days for processing instead of the 45 days for a Type 54. NOT a good choice if you are planning to do more than 1 show in the next 3 years.
- C. Apply for the new Type 60 permit. The form for this permit is not available at this time. The BATFE is not sure when it will be available. Here is what is known about this permit. It will allow up to 6 purchases from an IN state distributor within 1 year. It will cost \$25 per year. It will require the same background check as the Type 54 and 55, complete with fingerprint card and photo submitted with application. Allow 90 days to process. When these are available we will have them for you.

If you are interested in a lot of reading material on the above, I would suggest you visit the BATFE site at www.atf.gov.

I look forward to assisting you in this transition and hope the proceeding has helped clarify the confusion and rumors that have run rampant. As always we look forward to supplying you with the best product and service you can buy.

Mayor

"The Space to be
in the 21st Century"

November 22, 2005

Mr. Shane Smith
Regional Manager
Premier Pyrotechnics, Inc.
124 River Oaks Drive
Madison, AL 35758

Dear Shane:

I wanted to let you know what a wonderful job Premier Pyrotechnics did this summer with the City of Huntsville's Bicentennial Celebration events, and a fitting way to end each evening.

But by far, the most impressive contribution you made to our Bicentennial Celebration was the fireworks display to end our Unity Day concert in Big Spring Park. Our city has certainly never experienced anything quite as grand as what we saw that evening. I can't tell you how many citizens have told me how pleased they were with the fireworks that night. They were very special, and most definitely, "over and above" what one expects to see during a fireworks display. They will be remembered for years to come by all those who saw them. It was a fitting tribute for our city's 200th birthday. Thank you again for making the district events and Unity Day so exciting and memorable.

Sincerely,

Loretta Spencer
Mayor

Dear Marty,

I just wanted to thank you for the great work you did on the 21st Century Waterfront Grand Opening in Chattanooga, TN on May 14th. I was very impressed with your choreography of the show. I appreciated all the hard work you and your crew performed to make that show the best it could be. The client was extremely happy with the show.

Enclosed you will find a DVD of the Grand Finale made by the video company that was working on the event. I was very impressed when I saw the show on the DVD. I think you will be happy with the end result.

Stone Mountain Media plans on using the footage as promotional material, promoting Premier Pyrotechnics as our partner in this production. Please feel free to use this footage in the same respect.

Once again, thank you for the outstanding production. I look forward to working with you on future projects.

Sincerely,

Dear Sir:

This letter is being sent to commend Mr. Patrick Seeley, Director of Operations - Kansas City Division as well as Mr. Chris Bloom the shooter in charge of our display for the outstanding support they have provided. These two individuals are extremely competent and professional and should be highly complimented for representing your company in such a quality manner. The fireworks display for Lake Lotawana received nothing but "rave reviews," and "most spectacular fireworks display we have ever seen in our 26 years at Lotawana." In addition, the Fire Chief reported that the fire department was extremely impressed with the set up process, the quick clean up and the safety factors employed by everyone involved in the shooting.

We will look forward to receiving your bid for the 2006 fireworks display.

Sincerely,

Neida Perrie
Executive Director

SIX LEVELS OF SERVICE

If you need a complete, worry free, turn-key fireworks production, or just the product to shoot your own show, Premier Pyrotechnics, Inc. can fill your needs. Below you'll find our six standard levels of service.

Silver Whirl Wind

5 Pointed Star
with Ring

600's Silver Swallow

100's Red
Chrysanthemum
with Palm Core

LEVEL 1: ***The Ship Show*** – Premier Pyrotechnics, Inc. will provide and deliver your custom designed fireworks, mortars, a fireworks safety distance chart and \$1,000,000 liability insurance (if needed). We strongly recommend attending one of our Fireworks Training Seminars held in the spring in seven convenient locations.

LEVEL 2: ***The Electronic Ship Show*** – Same offering as Level 1 with the addition that we supply your qualified shooters with an electronic firing system (upon completion of our Shooters Training School).

LEVEL 3: ***Our first Turn-Key offering*** – Premier Pyrotechnics, Inc. will custom design your show, conduct a comprehensive site survey, furnish all fireworks material and product delivery, provide a team of qualified pyrotechnicians to coordinate and execute your fireworks program from set-up to clean-up, follow through on all required fireworks and program permitting, provide \$5,000,000 liability insurance to cover the sponsor, the public, property owner, other participants including ourselves and provide you the option of creating a pyromusical program or a complete sound reinforcement package. Our staff will conduct a post-display follow-up to insure all of your pyrotechnic demands have been met.

LEVEL 4: ***The Electronic Turn-Key Program*** – Same offering as Level 3 with the addition that we utilize electronic firing technology to control the display of your custom designed fireworks program.

LEVEL 5: ***The Electronic Turn-Key Pyromusical Program*** – Premier Pyrotechnics, Inc. will provide you with a complete electronically fired turn-key fireworks program that is choreographed to your customized music program.

LEVEL 6: ***The complete Multimedia Program*** – This program features a complete computer fired turn-key pyromusical program fired by our state-of-the-art firing system. This type of presentation often involves a large fireworks display that is synchronized with radio or a sound track simulcast. Full multimedia events can include pyro, video, audio, laser and confetti effects.

I would like to thank all of you people at Premier Pyrotechnics, Inc. for all the help you have given our department. I would also like to thank you for the quality product you have sold us in the past years.

Thank You,
Nick D. Mosher
C.F.O. Pleasantville Emergency Services, Pleasantville Fire Department

SHELL DISPLAY ASSORTMENTS

Designed to fit any budget, our assortments incorporate several shell varieties with multiple effects, reports and break patterns, including a number of special effect canister and multi-break shells. Each assortment includes safety and firing instructions, free fuses and mortars on loan at no additional charge.

We strive to supply the assortment you order, but due to circumstances beyond our control (international shipping primarily), we sometimes experience product outages. We may from time to time substitute one assortment for another of similar type and price.

Sorry we cannot break assortments.

CAKES – Multi-Shot Ground and Shell Displays

Commonly known as “Finale cakes,” “Barrage Units” or “Multiple Box” Ground Displays, these individual pieces can perform solo or tied into a multi-dimensional fireworks program producing a brilliant wall of fire or “grand finale.” The series of tubes set in a rectangular arrangement surrenders the nickname “cake” for most types of Multi-Shot Ground and Shell Displays. Pyrotechnicians often utilize several sequences of Multi-Shot Displays because of their duration, special effects, rapid firing intensity, and for their brilliant multiple color and changing sequences. The ease of firing an entire sequence of multiple shells and effects on a level surface without burying a single mortar also attributes to the popularity of the Multi-Shot Display. In many cases, the Multi-Shot Display unit can be safely located at a closer proximity to your audience (per NFPA Code 1123) as compared to the safety distance required for single mortar units. We’ve included a brief description of the pyrotechnic performance of each Multi-Shot Display to assist our customers in their search for certain types of Multi-Shot Display effects and sequences.

100's Assorted Report

150's Silver Whirl

100's Red Chrysanthemum with Palm Core

MULTI-SHOT DISPLAY WITH DESCRIPTION ✨	UNIT COST
16 shot 4" Assorted Color Shells	\$ 185.00

PREMIER PYROTECHNICS, INC.

Fan and Angle Cakes

Premier Pyrotechnics, Inc. is proud to offer a very special line of Multi-Shot Ground and Shell Displays commonly termed "Angle Cakes." An Angle Cake is designed to fire simultaneously an arrangement of shell sequences in a horizon or angle effect. In most cases the firing of shells forms a "W" effect with a center arrangement firing straight up the middle part of the "V" formation. The spread of shell sequences in angle cakes broadens your display front and often lends itself in the development of "crossing" cake and ground display patterns. We're very excited that our customers will thoroughly enjoy scripting angle cakes into their next fireworks program, and receive rave reviews from their audiences! Note the cake dimensions given at the beginning of each angle cake description. An example of an 8 x 5 angle cake indicates the cake has 8 rounds of 5 simultaneous shots fired in a fan arrangement, or a total of 40 shots fired 5 at a time. Angle cakes with shot count designations indicate finale cakes firing rapidly in all directions without unison.

2.5" 36's Color Crackling

300's Fan Shaped Blue Tail and Red Crossette

100's Dancing Butterflies

ANGLE CAKE WITH DESCRIPTION 	UNIT COST

49's Silver Dragon Flower

2.5" 36's Color Peony with Tail

PREMIER PYROTECHNICS, INC.

OTHER GROUND DISPLAYS

Premier Pyrotechnics carries a large assortment of Roman Candles with numerous effects ranging in size from 1.5" to 3" in diameter. For those interested in creating brilliant waterfront and duration frontage sequences, we offer a variety of 2" - 30 second fountains, 60 second waterfalls, color wheels and set pieces custom designed for your specific venue.

1.5" Single Fountain

Waterfall Chain

OTHER GROUND DISPLAYS WITH DESCRIPTION	UNIT COST
Girandola	\$ 24.00
<i>Rising wheel leaving a shower of sparks climbing to heights of 120 feet while explosions of color and report leave audiences amazed.</i>	
• UFO Girandola	• Butterfly and Green Flowers
• Butterfly with Report	• Butterfly and Willow
• Butterfly and White Flowers	• Whistle, Butterflies and Red Flowers
• Butterfly and Small Colored Flowers	• Assorted Crossettes and Salute
2" Big Gold Fountain	\$ 12.75
<i>Very bright shower of golden sparks with a duration of 30 seconds and a zenith of approximately 30 feet.</i>	
2" Big White Fountain (same description as Big Gold Fountain)	\$ 12.75
2" Crackle Fountain	\$ 12.75
<i>Loud gold crackle roar to a height of approximately 25 feet with a duration of 30 seconds.</i>	
2" Color Fountain	\$ 12.75
<i>Gold body of sparks with mixed colors topping the plume.</i>	
60 second - 15 foot Red & Green Waterfall Lengths	\$ 40.00
60 second - 10 foot Waterfall Lengths	\$ 29.00
<i>An excellent bridge or goal post item used to simulate a cascading golden waterfall</i>	
120 second - 10 foot Waterfall Chain	\$ 40.00
Color Wheel	\$ 45.00
<i>A high rpm spinning and sparkling wheel ideal for close proximity audiences; must be mounted to a post structure. Resembling a medium sized spoke bike wheel, "pinwheels" are quite popular and novel.</i>	
Set Pieces	Call for Quote
<i>Eg. - 4' x 6' or 5' x 8' American Flags, Sponsorship Emblems, Letters and Word Formations. Ideal to recognize your top show sponsors and always a traditional way to end your show with the American Flag set piece. Our staff will be happy to custom design your wishes into a set piece...from "local slogans" and cartoon characters to the latest in popular themes.</i>	
Colored Lance - 1 gross box (144 count)	\$ 40.00
<i>30 second duration brilliant colored 4" flares used for set piece construction. Please specify colors when ordering. Available in Red, White, Blue, Yellow, Purple and Green.</i>

FW22D/Double Strand - 1000 foot reel	\$ 32.50

PREMIER PYROTECHNICS, INC.

ROMAN CANDLES

Roman Candles are long cardboard tubes loaded with comets and other pyrotechnic devices such as whistles, hummers, bombettes, and serpents, along with a lift or propelling charge. Each pyrotechnic charge and load is arranged in a repeating series referred to as balls, separated by a delay composition that burns slowly thus providing a time interval between firings. The term "exhibition candle" is often applied to larger diameter Roman Candles. Roman Candles are best utilized in conjunction with multi-shot ground display frontage; often arranged in horizon and "V" formations creating dazzling intersecting trails of color and crackle. Candles described as having a tail produce a comet type effect. Candles with crossettes, rain, or willows indicate a secondary break "shell" effect. All candles require good staking to support the repeated discharge of effects.

1.5" CANDLES • 8 BALLS – \$9.00 EACH

1.5" and 2" Roman Candles

2.5" and 3" Roman Candles

PREMIER PYROTECHNICS, INC.

MINES

Mines create a cone-shaped color effect from the ground up, with the height of the effect dependent on the size of the mine. Mines create an amazing ground effect when fired simultaneously from multiple frontage positions. *Note: Mines should not be hand fired.*

CANISTER SHELLS – OPEN STOCK

We are proud to introduce our new line of canister shells. Compare them to any shell built by any American or Italian shell builder. You will be pleased. Shell for shell, they produce an effect which lasts one to two times longer than a similar-sized ball shell. They are a great focal point for your show.

Matt,

Just wanted to tell you how pleased we were with the product we received from you for our 4th of July Show. Wayne Brownfield orders the product from you for our show in Hot Springs, AR. All I can say is everybody was very pleased with our show.

Thanks for everything, you have one great company!

Scott Isaacs

PREMIER AERIAL SHELLS – OPEN STOCK

Premier's intense focus on worldwide shell research has led our company to the development of the Premier International Office in China. We currently have full-time company staffing on two continents monitoring the latest developments in several key areas including product quality control, shell effects, and customized shell designs. Through our Premier International Office, we have developed many personalized business relationships with key fireworks manufacturers abroad. Most importantly, Premier now has the ability to direct the logistical flow of international fireworks container shipments thus lending a crucial role in supplying our retail and wholesale customers with their demands on a timely basis anytime of the year. Our "joined forces" allows Premier to test the quality and effects of a certain product, report the findings to our international staff, and have any needed upgrades made to that product within 24 hours. That's impressive! We believe that our uncompromising search for the highest quality aerial shells has a direct influence on the spectator rating and attendance levels at your fireworks displays and your future displays. It all starts with the research and development of the individual product.

PREMIER ELECTRONIC FIRING SYSTEMS

CONTROL PANELS

Model CP-100

Our control panels are designed with the pyrotechnician in mind. Ease of operation, coupled with the highest regard for safety, is built into every panel. All panels feature a solid state On/Off switch, as well as a Test/Fire switch. When the panel is in test mode the Green Test light is lit. As the operator touches the firing probe to each contact, a tone is heard, alerting the operator, of a continuity presence on that cue. When the operator switches the panel into the Fire Mode, the Red Fire light is lit. In fire mode, when the operator touches the probe to the contact, the device on that cue is fired. Other than the On/Off and Test/Fire switches, which are rated at 10,000 activations, there are no knobs or switches to fail. This results in outstanding pyrotechnic performances, high reliability and ease of operation. Panels are available in 100, 200, 300 and 400 cue models and all come in hardwood carrying cases.

MODEL NUMBER	UNIT COST	MODEL NUMBER	UNIT COST
CP-100	\$ 431.25	CP-300	\$ 897.00
CP-200	\$ 655.50	CP-400	\$1,138.50

RAILS & MODULES

Model B-01

Rails and Modules are both termination points in the firing system and entrance points for the electronic match. Both feature high quality, spring activated connectors, with 50 cues per unit. The primary difference is that rails are designed to be attached to racks or sandboxes, while modules are designed to be used for fronts. Rails come standard in 20, 30 and 40-foot lengths (10 foot connected folding sections) and do not come with a piggy-tail through connector unless requested. Modules are designed for expanding frontage, therefore come standard with a through piggy-tail connector. This allows the user to place 50 identical cues in many frontage locations allowing for simultaneous firing with the touch of one cue. Below are listed the standard configurations for Rails and Modules. Custom patterns are available and encouraged.

MODEL NUMBER AND DESCRIPTION	UNIT COST	MODEL NUMBER AND DESCRIPTION	UNIT COST
R-20 – 20 foot, 50 cue	\$ 362.25	R-40 – 40 foot, 50 cue	\$ 385.25
R-30 – 30 foot, 50 cue	\$ 373.50	B-01 – Single box, 50 cue	\$ 362.25

CABLES & EXTRAS

One cable is required for each rail or module you wish to connect to the control panel. Additionally, for each module you piggy-tail out you will need one cable. You can purchase 12-volt batteries locally. We suggest a minimum of 12 volts and a maximum of 24. If you have any customization ideas feel free to call and we will try to accommodate your request.

ITEM	UNIT COST	ITEM	UNIT COST
C-50 Cable	\$ 29.00	Light for CP	\$ 46.00
C-100 Cable	\$ 46.00		

PREMIER PYROTECHNICS, INC.

HARDWARE & ACCESSORIES

MORTARS

High Density Polyethylene with Wood Plugs – In compliance with NFPA 1123 standards, our mortars are made from the highest quality wooden plugs and High Density Polyethylene available in the pyrotechnic field. All mortars are handcrafted and individually inspected for safety and durability. We meet mortar demands within a week of receiving the order due to our year round production facility.

PREMIER PYROTECHNICS, INC.

REQUIRED PERMITS & GOVERNMENT FORMS

PLEASE READ BEFORE ORDERING

- Fireworks displays are legal in every state.
- Government entities (eg., Fire Department, Police Department, City, County, and State Departments) are not required to obtain ATF permitting.
- To purchase 1.3G or Special Display Fireworks you must possess an ATF Permit if you are an individual. See page 5.
- We must have your ATF License or Permit on file to place your order if you do not meet the government entity exemption.

LOCAL PERMITS

You may be required to obtain a local permit(s) due to local or state regulations. The local Fire Department or Fire Marshal's Department is a good place to start when verifying local fireworks display regulations and permitting. Call us if you need assistance on local fireworks permitting.

Premier Pyrotechnics, Inc. will be happy to assist you with all applicable governmental forms.

ORDERING & SPECIAL DISCOUNTS

ORDERING FIREWORKS

In the past, Premier Pyrotechnics, Inc. realized that most of our customers prefer our sales force to review their fireworks orders, and describe several fireworks programming ideas and product effects on a personal basis. Frankly, I'm not sure if we ever received a completed order form straight out of our catalog. Therefore, our sales force has elected to provide our customers with an ordering package that will include your personalized bid proposal and/or completed order form, and a review and option to include our \$1,000,000 insurance policy at a percentage cost over show rate. Once your account is established with us, a toll free call to our home office at 1-888-647-6863 will allow us to rapidly generate your invoice and immediately process your order for any additional fireworks orders placed throughout the year or for additions placed on your original order.

SAVE MONEY ORDERING FIREWORKS!

SPECIAL FIREWORKS DISCOUNTS

We offer the following Fireworks Product Discount on all *Ship Show* and *Turn-Key* accounts:

- 10% additional product added to order if paid in full by April 1st (for July 4th or later shows only).
- 5% additional product added to order for multi year contracts (3 year or longer).
- **FREE SHIPPING!** Pick your product up at one of our 14 magazine locations:

Huntsville, Alabama	Richland, Missouri
Little Rock, Arkansas	Buffalo, New York
Orlando, Florida	Sturgis, South Dakota
Kansas	Timber Lake, South Dakota
Crookston, Minnesota	Yankton, South Dakota
Branson, Missouri	Gainsville, Texas
Peculiar, Missouri	Hurricane, West Virginia
- We will work with customers who prefer to use a licensed private carrier, or minimize shipping costs by splitting or dividing incurred shipping costs between customers on multi-drop deliveries.

ORDERING TIPS AND GENERAL INFORMATION

Sales Tax – Sales tax is applicable based on the current State Sales Tax Rate of your residing State, unless your organization can provide us with a Tax Exempt Status document (we will need a copy for our records). All purchases picked up at our dock are subject to the current Missouri sales tax rate.

Product Substitution – If we are out of a certain item or shell, we will make a product substitution of equal or greater value.

Mortars – Mortars will be supplied only when requested. Mortars are loaned on a return basis or may be purchased through our company.

DISPLAY FIREWORKS

FIRING INSTRUCTIONS

We use the NFPA 1123 Code for the Outdoor Display of Fireworks as our safety standard. Most fireworks and insurance companies have adopted these guidelines as well. Below is a chart we use that compares the size of the shell to the diameter of a circle. In the middle of this circle is where the fireworks are fired. There are two types of fireworks, ground and aerial. Aerial shells require a minimum of 70 feet per shell diameter from crowd to firing site. When selecting a site for your display, choose an area free from overhead obstructions such as trees and wires. Your site must include a "no-man's land." This is the downwind side of the circle. This is for the safe fall out of spent missiles, sparks or misfires. This area must be kept clear of stray spectators. Exceptions can be made by the authority having jurisdiction.

Waterfall Chain

1.5" 8 Ball Red
Crossette Candle

SHELL SIZE 
BY DIAMETER

MINIMUM RADIUS OF DISPLAY SITE FOR
OUTDOOR DISPLAY OF FIREWORKS

Under 3 inch	140 feet
3 inch	210 feet
4 inch	280 feet
5 inch	350 feet
6 inch	420 feet
7 inch	490 feet
8 inch	560 feet
10 inch	700 feet
12 inch	840 feet
Over 12 inch	Approval of authority having jurisdiction.

Please be sure all these instructions are read carefully by ALL persons who will do the setting up and firing BEFORE they begin setting up the display.

GENERAL INFORMATION

When you receive your shipment, inventory it to make sure everything is there and not damaged. Then store it immediately in a dry location which is not accessible to unauthorized persons. Fireworks are 1.3G and 1.4G Explosives, and should be treated with much respect for the explosive potential they have. Presumably they will not explode by concussion or jarring, but such action could damage the item and cause it to fire incorrectly. They do possess a flammable hazard and should be kept away from extreme heat.

When setting your mortars into the ground, always place a heavy board or timber, or rock slab, in the bottom of the hole under the mortars. This prevents the mortars from sinking into the ground when you start shooting shells. Bags of earth or sand should be placed to form a barricade to protect the operators and spectators if a shell should explode in the mortar. Mortars should be at least a foot apart, most conveniently in a row with the smallest mortar at one end and progressing in size to the largest mortar at the other end. ALL mortars should be set in the earth so that a maximum of four inches remains above the ground level.

(continued on page 43)

PREMIER PYROTECHNICS, INC.

DISPLAY FIREWORKS *continued*

GENERAL INFORMATION

Tamp the earth firmly around the mortar. When placing mortars near a body of water, or in damp ground, it is best to cover the bottom of the mortar with a plastic bag to prevent water seepage. Also, it is best to cover the mortars to keep out water and dirt if there is a considerable period of time between placing of mortars and firing the display. Wrapping the mortars in a few layers of old newspapers will make it a lot easier to remove the mortars when finished. Handle shells properly. If a fuse runs through the loop at top of the shell, **DO NOT REMOVE**. Leave all safety caps on fuse tips until ready to ignite. Shell boxes should be kept at least 25 feet UPWIND from the mortars and kept covered with a fireproof covering at all times to prevent sparks or falling debris from igniting the unused shells. The shell must go to the bottom of the mortar with the lift part of the shell on the bottom.

PROTECT SHELLS, FLARES AND FUSES FROM ALL HAZARDS – SPARKS, FIRE, RAIN AND SMOKING CIGARETTES

When you unpack the shells, sort them out according to which size mortar they fit. Familiarize yourself with shell sizes and corresponding mortar sizes before you begin firing. A 3-inch diameter or 9-inch circumference shell is to be fired from a mortar with an **INSIDE** diameter of three inches. If you put a 9-inch shell (3-inch) in a mortar with an inside diameter of four inches, the propulsion charge will lift the shell only a few feet and the shell will probably burst on the ground.

SUMMARY

Treat all fireworks with the respect they deserve. Being a handmade product, there is always a possibility of human error in its construction, but if you take all the proper safety precautions there is no reason for personal injury to the operator or spectators. Fireworks are one of the greatest audience pleasers available and it is only through their careless use that accidents result. If you have any difficulty understanding these instructions, or have any further questions, please check with us. Don't guess!

Please read ALL instructions!

Matt & Company,

Thank you for the GREAT fireworks on the 4th! It was awesome and Jefferson City is still talking about it.

Please let everyone who had a part of the show know how thrilled we were with it all.

Sincerely,

Angie Baugher

PREMIER PYROTECHNICS, INC.

2006 SHOOTER'S SCHOOL

A SPECIAL INVITATION

Premier Pyrotechnics, Inc. is pleased to invite you to our winter and spring shooter's schools. We are offering our shooter's schools in Huntsville, Alabama; Ashville, Ohio; Sherwood Forest, Arkansas; Richland, Missouri; Gainesville, Texas; Columbus, Nebraska and Mishawaka, Indiana. We hope that you'll find the geographic location of one of these seven schools convenient for you.

We feel that your attendance at any of these schools is one of the most important steps you can take to insure the safety and success of your display. Whether your organization hand-fires your own display, or has our company present a complete turn-key multimedia pyromusical, you will benefit from this intensive hands-on school. From the very basics, safely hand firing three inch shells to wiring the most spectacular finales ever imagined, you get a first-hand look at the specifics. We've also arranged for testing from the state fire marshal's office if applicable.

The total cost of attending, which includes lunch and dinner is \$35. The only thing you're required to bring to class is a desire to learn the art of safely displaying commercial fireworks. If you have safety gear such as fire-proof coat and pants as well as head, ear, eye and hand protection you should bring it along as well.

This year we will be offering the PGI Certified Shooters course as part of each school. If you desire to become a PGI Certified Shooter there is an additional \$50 charge for the material and testing. All \$50 goes to pay for the cost of printing and expenses associated with providing the certification. If you are in a state which requires shooter licensure, you should check with your state's fire marshal to determine if they accept reciprocity with the PGI Certificate.

For the benefit of planning, please fill out the registration form below indicating which school you will be attending. We look forward to seeing you at one of our schools.

For directions to the shooter's school, please visit our web site at www.premierpyro.com and look at our training seminars section. If you do not have internet access, please call the home office at 1-888-647-6863.

Laser Image Productions

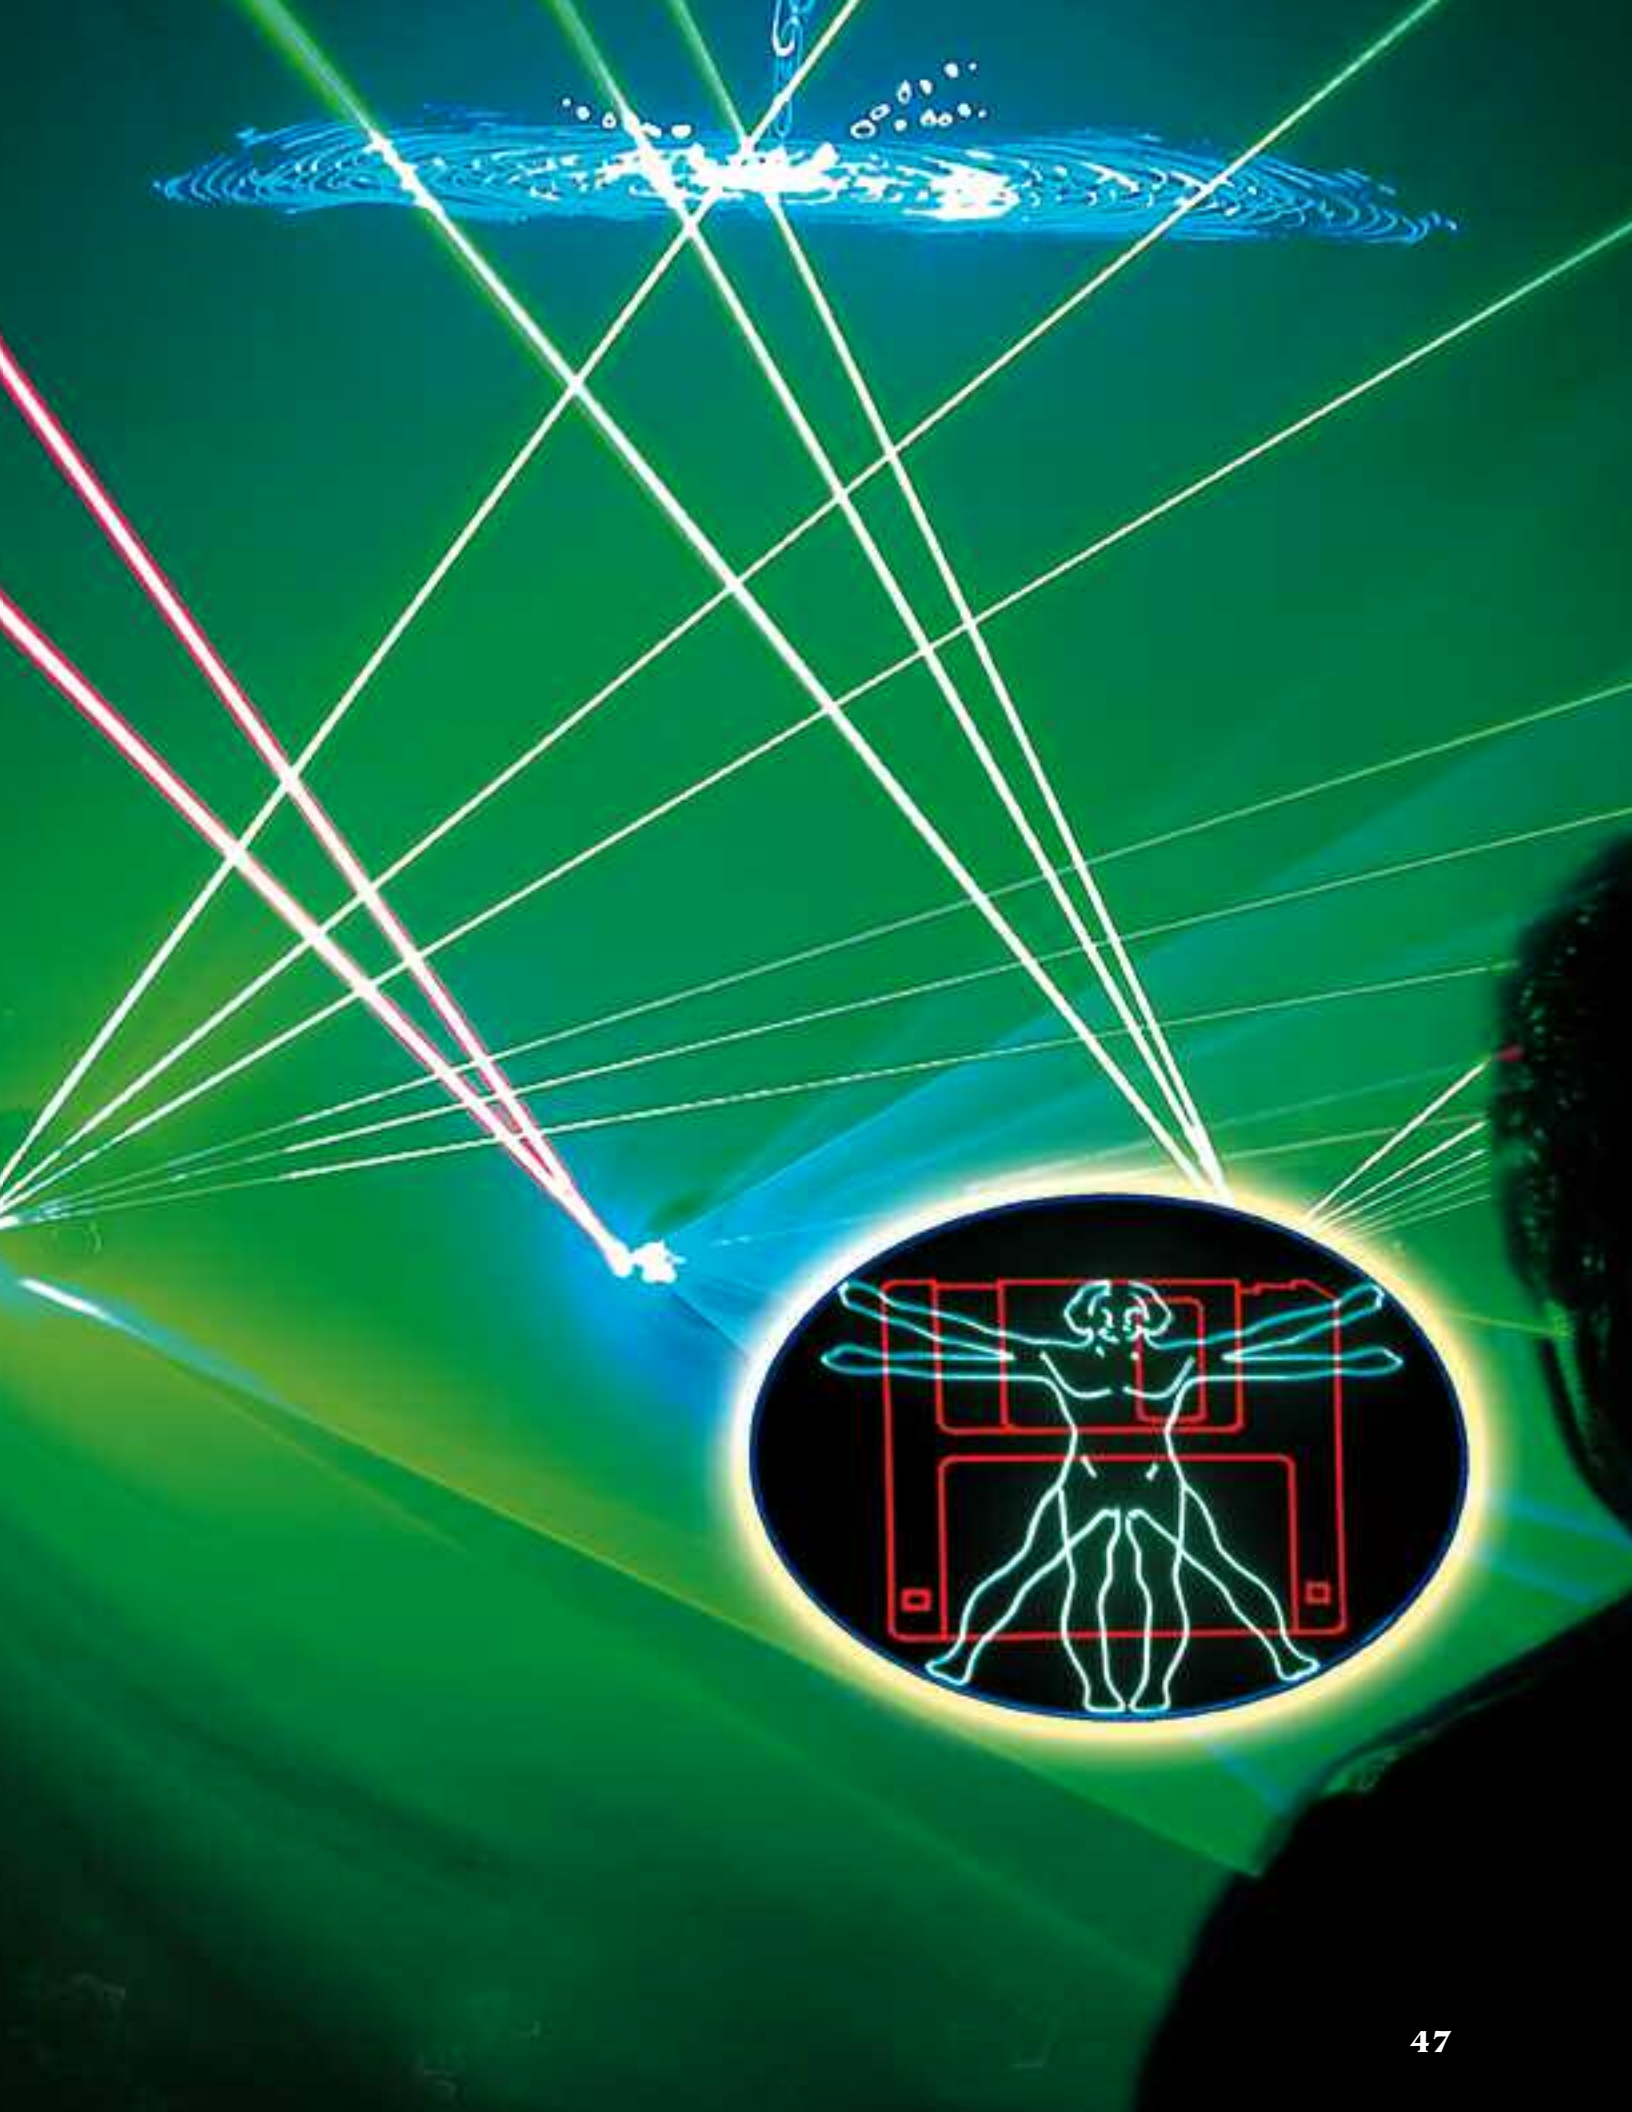

LASER LIGHT SHOWS

**Call us about a stand alone
laser light show or adding lasers
to your fireworks program.**

Our hi-tech, family friendly, Laser Light Shows, employ the latest laser graphics and digital sound technology. Laser beams shoot around the room like "Star Wars" and create clouds of floating light just above your head. Colorful animated graphics and beautiful aerial laser effects fill the area with unparalleled excitement. The whole exhilarating experience is choreographed to music soundtracks.

Laser shows are personalized and include event and sponsor logos. Productions can be integrated into existing audio or visual presentations, or act as an exciting primary entertainment. Shows can include custom graphics, sound tracks or pyrotechnics. Our shows are self-contained and include: state of the art high power lasers, fog machines, projection screen, sound system, intelligent lights and much more!

HANDSHOOTER'S CHECKLIST

IMPORTANT TIPS WHEN SHOOTING A FIREWORKS DISPLAY

Here are some additional very important tips when shooting a fireworks display:

- **Above all else** possess, read and understand NFPA-1123 the Code for Fireworks Display. Call 617-770-3000 or go online at www.nfpa.org to get your copy. THIS CODE BOOK MUST BE ON THE DISPLAY SITE.
- **Check online** at www.americanpyro.com and click on Directory of State Laws for the most current state laws regarding fireworks displays.
- **Read and review** all firing instructions included with your order prior to set-up and firing of your show.
- **Verify site layout** and adherence to NFPA distance regulations.
- **Verify program security** and emergency services several days in advance of the display.
- **Set up ground pieces** during the daytime hours. If possible wet down the grass in the area immediately surrounding the firing area prior to the display.
- **Never leave unsecured** fireworks unattended or in harms way of hazardous situations (eg., exposed to smokers, near a pit BBQ fire, open to lightning strikes, etc.). A very large percentage of fireworks display injuries occur during unsafe handling and storage of class B fireworks prior to a fireworks display.
- **Shell boxes should be located** 50 feet or more from the mortars and should be covered with a fire retardant tarpaulin to prevent sparks from igniting them.
- **When loading shells** into mortars, do not hold them by the body. Lower the shell into the mortar by the fuse (or on larger shells by the drop string attached).
- **Very important!** Do not lean over the mortar anytime while loading, cleaning or firing. The shooter should light the shell while leaning away from the mortar and should be in such a position that he can retreat immediately after lighting the fuse.
- **Mortars should be checked** with a cleaning rod after each shell is fired to prevent paper accumulation in the mortars.
- **A misfired shell** still in a mortar should be left untouched in the mortar and immediately soaked with water, and then designate that mortar as inactive for the remainder of the show.
- **Police the firing area** at the conclusion of every display to be certain that no dangerous items and unexploded shells are left on the premises which might constitute a hazard to the general public.

2.5" 36's Color Crackling

100's Dancing Butterflies

150's Silver Crackling Stars

100's Assorted Tail and Chrysanthemum and Salute

SHELL EFFECTS GLOSSARY

150's Silver Whirl

100's Happy Stars

2.5" 36's Color Peony
with Tail

Artillery Multiple reports.

BATFE Bureau of Alcohol, Tobacco, Firearms and Explosives. A federal agency which oversees and regulates the safe use and handling of fireworks.

Battle in the Clouds Multiple silver sparked reports followed by a heavy report.

Black Match A fuse made from thread impregnated with black powder.

Break of Saettine Shell A ring of shots thrown out forcefully and uniformly thus forming a ring in the sky. The shots all perform at the same time.

Bombette Shell French and English term used interchangeably with Pupadelle or color insert.

Canister Shell Shaped like a cylinder containing any of a number of effects. 3" resembles a soda can. Canister shells contain a larger volume of stars or inserts than round shells.

Cannonade Shell A group of shots that travel for a few instants after the shell breaks and then perform more or less together, usually with significant impact. Can be preceded by a color break. The shots are fewer and larger than Fusilading shots.

Chrysanthemum A multi-axially symmetrical break pattern wherein tailed stars are thrown out from the center apparently straight and hard, creating a burst of spokes and an expanding globe of color.

Coconut Tree Similar to a Palm Tree shell.

Color A single burst of color stars.

Color Changing Shell Stars that change from one color to another color.

Color Changing Spider Hard break of gold tailed stars that change to a bright color at the end.

Color & Report A single asymmetrical break of colored stars followed by a heavy report.

Color, Whistle & Report An asymmetrical break of colored stars with multiple whistling or "screaming" serpents followed by a bottom shot or heavy report.

Comet A large cylindrical pumped star that leaves a sparked tail.

Cracklers with Treasure Chest A break of very bright mixed colors with crackling or dragon eggs.

Crackling The gold and silver sparked stars crackle, or erupt into snaps, pops, and flashes.

Crossette Also known as a Splitting Comet. A large pumped star that burns for a period of time then explodes from an internal shot. Smaller burning fragments fly outward from the star's trajectory. Traditionally, all stars in one timing break simultaneously. A further refinement is to have the fragments display symmetrically

PREMIER PYROTECHNICS, INC.

SHELL EFFECTS GLOSSARY *continued*

representing smaller comets shooting in different directions crossing over themselves.

Crown Also known as a Diadem Chrysanthemum. Similar to the Kamuro Chrysanthemum with the addition of a conventional inner pistil or petals of color stars and outer duration stars often with bright, short duration color core, frequently green or white.

Dahlia Symmetrical break of large comet stars. Their long duration creates a dropping effect. A peony type shell made with very bright stars.

Display Fireworks Fireworks devices primarily intended for commercial displays. Constituted as "Class B" Fireworks whereby salutes contain more than 130 mg. of explosives composition, aerial shell contain more than 40 grains (1.4 oz.) of chemical composition exclusive of lift charge.

DOT Department of Transportation. A Federal Agency responsible for regulating the labeling and transportation of fireworks in and around the United States.

Draw-Out A color break followed by 4 timed shots, followed by another color break and ending in a final report.

Finale String of shells fused together to fire rapidly in order from a rack of tubes (finale rack).

Firefly Also known as Transformation. A gold or silver flashing effect occurring in the tail of a star, dimmer and less defined than a strobe or a flitter, which continues for a very long period of time. The effect should appear to hang in the sky.

Fish & Whistle The fish are silver tailed serpents, the whistle is multiple screaming serpents.

Flitter A bright spark trail effect that does not split into sparks.

Fusilading Shot A group of shots that travel for a few instants after the shell breaks and then perform in a random fashion over a short period of time.

Go-Getter Self propelled stars.

Glitter Composition producing sparks that are ejected from the burning star and then proceed to split into finer sparks.

Hammer Shell A color break followed quickly by a report, another color break and report. This sequence traditionally repeated four times and often followed by a bottom shot.

Heart Pattern The colored stars form a heart pattern in the sky.

Kamuro Chrysanthemum A single-petaled chrysanthemum break with tailed stars of significant duration to create a pronounced and uniform willow effect. In conventional Oriental School practice a number of compositions are used to create this effect: nishiki (cloth of gold or brocade), glittering, etc., some changing to flash or color at the end.

Mine All of the stars are ignited as they leave the mortar. When multiple mines are fired at the same time from multiple locations, it can give the effect of a wash or wall of color or the effect of stars.

NFPA National Fire Protection Association. A national agency involved with enhancing and regulating the construction, handling, and use of fireworks. This agency, in affiliation with DOT and APA, is responsible for developing our universal fireworks code commonly known as NFPA 1123.

Nova A break of red and blue stars followed by a ring of silver sparked reports.

Palm Tree The trunk is the thick rising tail, the palms are made by large stars leaving a thick trail in a palm pattern.

Peony A multi-axially symmetrical break pattern wherein stars without pronounced fire trails are thrown out from the center, apparently straight and hard, creating a hollow expanding globe of color.

Portfire A long tube containing slow-burning pyrotechnic composition that is used to ignite fireworks. Also termed Fusee, commonly used as a highway safety distress signal.

Pupatelle/Pupadelle Small insert shells that are inserted to produce a splash of color.

Silver Crossettes

300's Fan Shaped Blue Tail and Red Crossette

Red Bees Comet with Report

SHELL EFFECTS GLOSSARY *continued*

100's Silver
Chrysanthemum

Green Crossette

Silver Crown

5 Pointed Star
with Ring

Quickmatch Black match concealed in a paper wrap or tubing to create instantaneous ignition.

Report Salute; a loud concussion.

Ring or Rondel A ring of shots thrown out forcefully and uniformly. The shots are timed to perform consecutively with precise timing, thus tracing the outline of a ring in the sky.

Rising Tail Shells that leave a tail from the mortar up until they break. Can be on most kind of shells.

Saettine Shot originally made with dark flash, thus producing a report with low light output.

Salute A brilliant flash or light followed by thunderous clap of noise; report.

Saturn Ring A peony with a different colored ring surrounding it resembling the planet Saturn and its rings.

Serpent A small tube device with an opening at one end, producing a visual effect (tail) tracing an often erratic course in its display.

Shell of Shells This shell contains smaller shells inside. These shells are thrown out into a wide circular pattern producing a ring of small bursts of color or other effects.

Snap Dragon Asymmetrical break of variegated stars with screeching whistles.

Spiderweb A shell with an especially hard break that is usually filled with stars producing a golden charcoal streamer effect, but also occasionally appearing today in silver/white and other color effects. The long duration of this effect enable it to form a veil or web across the sky.

Star in a Ring Pattern The colored stars form a star pattern in the sky. Around this star is a ring pattern of colored stars.

Star Pattern The colored stars form a star pattern in the sky.

Sticky Match Match used to fuse together lance forming a set-piece. Available in different rates of burn speed.

Strobe Extremely brilliant; the stars strobe or flash on and off as they fall through the sky.

Stickless Rocket Rising gold or silver fireball that leaves a long sparked tail.

Theatrical Pyrotechnics Pyrotechnic devices for professional use in the entertainment industry similar to "Consumer Fireworks" in chemical composition and construction but not intended for consumer use.

Three Break Three timed breaks of different colors or two breaks of different colors followed by a heavy report.

Tiger Tail A rising fireball that leaves a soft glittering tail and then breaks with its specific effect or color.

Titanium Salute A Salute shell with Flash special effect.

Tourbillion Tube of composition with a hole or holes causing a spiral like effect as the tubes are propelled through the air.

Wall of Fire A set of 12 or more tailed shells connected electronically to fire simultaneously giving the effects of a rising wall of gold or silver sparked comets.

Willow A break of stars, usually with pronounced fire trails, of duration sufficient to create a drooping or weeping effect. The initial effect may or may not be symmetrical.

Whistle A small tube filled with a fierce burning composition causing a whistling effect as it burns. These shells can also have color. Thus you have a color and whistle or star and whistle shell.

NOTE: Further detailed fireworks definitions can be located in the NFPA 1123 - Code for Fireworks Displays.
